

Breaking Down Barriers: Using Docsify-This As an Entry Point to Markdown Open Publishing

The open-source web app [Docsify-This.net](https://docsify-this.net), built with the unique no-build site generator [Docsify.js.org](https://docsify.js.org), provides a quick way to publish one or more online Markdown files as standalone web pages without needing to set up your own website.

1. Display the following Markdown file URL as a standalone Web page
<https://github.com/paulhibbitts/github-demo-markdown-file/blob/main/README.md>
2. Display a Markdown file URL of your choice as a standalone Web page. If you do not have a Markdown file URL handy you can use the following URL
<https://github.com/idleberg/Creative-Commons-Markdown/blob/main/4.0/by.markdown>
3. Visually style a displayed Markdown file using the Web Page Builder, for example change the page font family or link color
4. Share the URL of a Web page created by Docsify-This Web Page Builder
5. Decode the URL parameters of the following raw Docsify-This Web Page URL
<https://docsify-this.net/?basePath=https://raw.codeberg.page/paulhibbitts/codeberg-demo-markdown-file&homepage=README.md&sidebar=true&link-color=CC0000>
6. Change the visual style of the above Web page displayed by Docsify-This using URL parameters (and not the Web Page Builder), for example set the link color to '0000FF' (blue)
7. Access the Docsify-This Advanced Web Page Builder
8. Using the Advanced Web Page Builder, display a collection of Markdown files as a standalone Website with a custom Docsify Sidebar using the following Markdown file
<https://github.com/hibbitts-design/docsify-this-visual-portfolio/blob/main/README.md>

STRETCH GOAL

- Create a Markdown file on either [GitHub.com](https://github.com) or [Codeberg.org](https://codeberg.org) and display it with Docsify-This
