Breaking Down Barriers: Using Docsify-This As an Entry Point to Markdown Open Publishing

Worksheet

The open-source web app Docsify-This.net, built with the unique no-build site generator Docsify.js.org, provides a quick way to publish one or more online Markdown files as standalone web pages without needing to set up your own website.

1. Display the following Markdown file URL as a standalone Web page
   https://github.com/paulhibbitts/github-demo-markdown-file/blob/main/README.md

2. Display a Markdown file URL of your choice as a standalone Web page. If you do not have a Markdown file URL handy you can use the following URL
   https://codeberg.org/Codeberg/Documentation/src/branch/main/README.md

3. Visually style a displayed Markdown file using the Web Page Builder, for example change the page font family or link color

4. Share the URL of a Web page created by Docsify-This Web Page Builder

5. Decode the URL parameters of the following raw Docsify-This Web Page URL
   https://docsify-this.net/?basePath=https://raw.codeberg.page/paulhibbitts/codeberg-demo-markdown-file&homepage=README.md&sidebar=true&link-color=CC0000

6. Change the visual style of the above Web page displayed by Docsify-This using URL parameters (and not the Web Page Builder), for example set the link color to 0000FF (blue)

7. Access the Docsify-This Advanced Web Page Builder

8. Using the Advanced Web Page Builder, display a collection of Markdown files as a standalone Website with a custom Docsify Sidebar using the following Markdown file
   https://github.com/hibbitts-design/docsify-this-visual-portfolio/blob/main/README.md

STRETCH GOAL
- Create a Markdown file on either GitHub.com or Codeberg.org and display it with Docsify-This
